**Subject:** microsoft settlement

I am opposed to the recent DOJ proposed settlement with Microsoft. It appears that the inclusion of a donation of Microsoft computers and software to schools would substantially increase marketshare for both hardware and software for the districts selected to participate.

Instead, I propose that dollar value be determined, donated to school districts to spend in whatever technological way they wish.

Further, I propose that Microsoft hardware and software divisions be prohibited from federal contract bidding for a period of not less than one year.

Let's give the few other companies with the capability a chance to make a real impact on the market!

Thank you for your efforts,

Dr. Julie Armstrong
